

Field Notes:

Date: Wednesday, November 30, 2006

07:00 - Arrived at site

Attended safety meeting and planning meeting

07:15 - Began field notes

07:25 - Traveled to Oxbow Area for observation

08:10 - Learned that beyond marked excavation area at Oxbow exists sludge

This area may increase the excavation area, and possibly damage trees onsite  
MDOT has requested (known through conversations with Terra and BBL) trees be preserved if possible.

Test pits have been completed at Oxbow, should be able to delineate area

Spoke with Steve of Terra and he indicated that they were not test pits, just going out and kicking soil round

Must talk with Pat McGuire to discuss the possible removal of trees and protocol for discovery of new areas

09:30 - Sent emails to Pat McGuire regarding fact sheet and also the residuals. Unknown if he will be returning to the site, if he at the Plainwell Impoundment, or other

09:45 - ~~Returning to A Site for walk around~~

Discussed the residuals outside the cordoned off area in the Oxbow Area

The areas will be excavated to see if the residuals are deep in the soil, though test pits completed prior showed they did not. Will keep me informed.

10:30 - Departed site. Heading home.
